

3rd Workshop on Binaries in the Solar System

June 30—July 2, 2013

West Coast of the Big Island, Hawaii

The goal of the workshop is to bring together various ideas on detection, characterization, and formation of binary and multiple objects among the NEO, main-belt, Trojan, and TNO populations.

In keeping with prior workshops (2007: Steamboat Springs, Colorado and 2010: Poznan, Poland), Binaries 3 will be held at a quiet and off-the-beaten-path location. These workshops were modeled after CD (see below), with generous amounts of time for discussion and interaction, in a relaxed environment. We are fortunate for 2013 that we can hold the workshops back-to-back.

For information, contact Bill Merline (merline@boulder.swri.edu)

Immediately preceding Binaries 3 (at the same resort) will be:

8th Workshop on Catastrophic Disruption in the Solar System (CD-8)

June 24 - 27, 2013

For more information, contact Bobby Bus (sjb@ifa.hawaii.edu)

We plan to organize optional field-trips to Mauna Kea (June 28), and to Volcanoes National Park (*both* before CD-8 and after Binaries 3).
